PROGRAM SPECIFIC OUTCOMES

M PHARM PHARMACOLOGY

PSO1	Students will acquire the ability to write and present substantial technical reports/ documents effectively. This skill set ensures clear and articulate communication of research findings and technical information in the field of pharmacology
PSO2	Graduates will possess advanced practical skills for conducting preclinical toxicity studies, including a nuanced understanding of various types of toxicity. They will demonstrate adeptness in safety monitoring, reporting, and close-out activities, ensuring comprehensive safety evaluations in drug development processes
PSO3	Students will demonstrate expertise in clinical trial design, understanding regulatory requirements, and executing safety monitoring, reporting, and close-out activities in clinical trials. They will also exhibit a strong grasp of pharmacovigilance principles, including the detection and assessment of adverse drug reactions and the implementation of effective reporting systems
